Dear colleagues!

Dmitry F. Chebotarev Institute of Gerontology of the National Academy of Medical Sciences of Ukraine, together with the Amosov National Institute of Cardiovascular Surgery and the National military medical clinical center "Main military clinical hospital" planned to hold the next, XXIV International Scientific and Practical Conference "Rehabilitation of military cardiocerebral lesions, prevention of complications," which will be held on October 18-19, 2023.

This conference is a logical continuation of scientific and practical forums that are held every year in Ukraine with the participation of scientists from Germany, France, Azerbaijan, Kazakhstan, Ukraine and practitioners of different regions of Ukraine (more than 2000 delegates each year). These conferences are very popular among scientists and practitioners of various specialties, including neurologists, cardiologists, therapists, family doctors, rehabilitation doctors, etc.

The period of 2022-2023 is extremely challenging in terms of the socio-medical situation, which creates new challenges and requires the adoption of adequate comprehensive solutions and the introduction of qualitatively new approaches to their solution, taking into account wartime. During this period, a large number of observations and unresolved medical issues have already been accumulated that require collective scientific and practical discussion by medical specialists from various fields at the international level.

Main scientific directions of the conference:

- 1) Traumatic brain injury, clinic and modern aspects of its neuropharmacology.
- 2) Cognitive and psycho-emotional disorders in blast injuries.
- 3) Hypertension and the problem of antihypertensive therapy in wartime.
- 4) Somato-neurological disorders in PTSD.
- 5) Problems of psychoneurological and physical rehabilitation of civilians and military personnel.
- 6) Insomnia problems in the background of stress and after stress disorder in civilians and military personnel.
- 7) Organizational and clinical aspects of providing medical care to patients with different clinical variants of mine-blast injuries.
- 8) Innovative opportunities in the treatment of Parkinson's disease and Alzheimer's disease.

9) Problems of cerebro-cardiovascular pathology in wartime.

10) A multidisciplinary approach to chronic pain.

11) Medical and social problems of our time.

Considerable attention will be paid to an integrated approach to the diagnosis and treatment of neurological disorders in the rehabilitation period after mine-blast trauma and psycho-emotional trauma.

The conference is planned to be held online in the form of plenary sessions, symposia, round tables, and master classes. Depending on the military and political situation and quarantine measures, it is possible that the event will be held offline.

Technical organizer and event provider of the BPR No. 1120, Visit-Service PE:

tel. +38 (044) 364-57-71, e-mail: office@vizitservice.com
